UNIVERSITY OF SOONGSIL

Bachelor of Software Engineering degree expected in

I'm a newbie developer who likes Web Front-End development and hybrid app development and hybrid app development :D

Through club activities, I am good at communication skills and work-related tools by establishing a framework for collaboration!

I have a habit of googling in real time whenever I don't know something.

I want to live a wonderful life like a 'Real Developer'.

And also I want to create a beautiful client app. :3

Certification and License

Engineer Information Processing (2019)

Work Experience	YOURSSU Web Front-end Lead	Mar 2019 – Present
-----------------	-----------------------------------	--------------------

- **Development of Soongsil University Lecture/Professor Evaluation Service Platform** Nov 2020 – Apr 2021
Responsible for producing Web programming and progressing some synchronization with native app internal web app features
<http://rank.yourssu.com>
- **YOURSU Technology Blog Development** July 2019 – Oct 2019
Yoursue Development Team Technology, Creating Hugo-based Technology Blogs to Share Latest Trend Information Trends.
Using React, custom webapp.
<https://intro.yourssu.com>
- **YOURSU landing page** Mar 2019 – May 2019
React, Gatsby-based landing page creation
<https://intro.yourssu.com>

Education	Soongsil University Bachelor of Software Engineering	Mar 2019 – Present
-----------	--	--------------------

Additional
Information

3th Prize, Soongsil University Software Department Contest

Nov 2020

One-to-many music real-time interworking service 'Playus' application development (Using Flutter)

Create tools for dataization and data classification automation in the National Library of Korea

July 2020

Weather Forecast Background

Mar 2020

[Toy project]

Simple Weather forecast background using by cra, Open Weather Api
Also Development with React Native

Best Award, 2019 IoT Makers Hackathon

Dec 2019

Development of a cafeteria equipped with cat object detection function based on cat photo instruction learning, Using Arduino + RaspberryPi 4 + TensorFlow Lite + node.js

2th Prize, 2020 Industrial Convergence Idea Commercialization Hackathon Award

Oct 2020

Proceeding with an Open CV-based human motion project

Dec 2019

[Toy project]

Develop a non-touch elevator display program based on finger tips tracking
Develop a guest mouse based on Face motion

Participation award, Korea IT Policy Management Association Academic Conference

Dec 2019

A paper on stray cat object detection techniques.

Participation award, 2019 Soongsil University Software Department Software Competition

Oct 2019

Motion Mouse Development with Depth Camera (I developed arduino coding)

Excellence Award, Soongsil University Python Competition

May 2019

Coffee Review Platform Site: Cofflavor

Aug 2018

Toy Project

[Site Description]

A platform that combines Coffee + Flavor to review the taste of coffee.

<https://cofflavor.herokuapp.com/>

Unable to use OOO's service because it has been terminated: (to be supplemented soon)

[Tech Stack]

Node.js + ejs + bootstrap + mongoDB

The Node.js server was deployed using a web hosting server provided by Heroku, and the MongoDB server named MLab was used to communicate between the two to configure the homepage.
